

International Table Ring Size Chart

How to correctly measure your finger

- Hands throughout **the day** may be more or less swollen.
- Hands are **more** swollen in the **morning**, less in the **evening** (usually).
- Don't measure your finger when it is too hot or too cold.
- For more Information or Details, you can read article, [How to Measure Fingers](#).
- Remember that **right and left hand are not the same size**, usually one can't wear the same ring on the same finger of both hands.
- Check that the size chosen runs well along the finger, usually **the knuckle is the widest point, so this is the point of greatest friction** and effort, when you want to put on or remove the Ring.
- The best way to measure your finger is to use our [Customer Kit](#), you will be put in the best conditions, to Accurately and Professionally measure your finger; you'll see, it will be very easy. All the Sizes on [RensiWeb.com](#), refer to our [Customer KIT](#).
- There are Many ways to Measure the fingers of your Hand, as shown and explained in our Article, **but almost all have a significant Error margin**.
- The right place to measure is the **knuckle of the finger to which the Ring is destined**, generally it is the widest point.

Choose the ring of your size with the greatest peace of mind.

- If you are undecided between 2 different sizes, take a few days to think and try again and again, preferably with our [Customer Kit](#); if you really cannot make up your mind, generally we recommend choosing the larger size.
- A problem not easy to solve, **having a ring of the right size**, but due to its width or shape is too small or too large. On Band Rings or Rings with a regular shape, by increasing the width, **the friction and encumbrance increase**, so a larger size might be necessary; just as in the case of Very thin or Fantasy rings there is a different fit, and they require a smaller size.

Important: Choose and buy without any problems, the sizes that we indicate on our website refer to the actual fit! **sometimes** a little different from the actual instrumental measurement.

- **e.g.:** If you **your** finger fits a **size 14** and you chose wide-band a Ring or Band Ring **size 14**, this will surely Not fit you!; you will **need a size 15.5/16**.
- Therefore, if we sell a wide band Ring size 16 (instrumental), we will indicate on the **website the real fit size as 14/14.5**.
- **You do not need to worry**, we will try to simplify everything as much as we can.

Important: Please Note: Don't worry about **"half" sizes (0.50)**, the difference is very small and **many people** fail to distinguish it; the difference **is so minimal**, that it can vary according to the producer/manufacturer, or simply according to the measurement instrument.

- Most jewellery producers/manufacturers, **produce only "full-sized" (10, 11, 12, etc.)** Rings and Band Rings. They do **not consider "half-sizes"**, not even in the event where you specifically require or order "custom-made".

Table created with the help of Professional Tools and certificate ISO 8653.
